PROFESSIONAL SUMMARY

AI Automation Engineer specializing in designing production-grade agentic workflows using n8n, LLMs, and advanced API orchestration. Proven track record in building autonomous content engines and voice-based AI agents that drive engagement and operational efficiency. Expert in creating resilient, event-driven systems with robust error handling, retries, and structured data validation.

TECHNICAL SKILLS

Automation: n8n (Advanced Logic, Code Nodes, Error Handling, Retries), Event-Driven Architecture, Webhooks

AI & Agents: LLM Integration (GPT-4o, Gemini 2.5 Flash), Agentic Workflows, Structured Prompting, LangChain

APIs: REST APIs (Vapi.ai, YouTube Data API, LinkedIn API, X API), JSON, OAuth2, Webhook response modes

Programming & DB: JavaScript (n8n Code Nodes), Python (Automation Scripting), SQL, Supabase, Convex

Tools: Docker, Git, Node.js, Linux

AUTOMATION PROJECTS

AI Voice Receptionist for Interior Design Agency (n8n)

- Designed a real-time voice AI system using n8n, Vapi.ai, and Convex to handle lead intake calls autonomously.
- Integrated Gemini 2.5 Flash to analyze call transcripts, extract sentiment, and determine interest levels.
- Implemented a two-stage webhook system to initiate calls and capture end-of-call reports with structured JSON analysis.
- Automated storage of insights and recording URLs into a Convex backend for real-time visibility.

Multi-Platform Content Repurposing Pipeline (X to LinkedIn)

- Built an autonomous engine that monitors trending automation topics on X (Twitter) and repurposes them into high-engagement LinkedIn posts.
- Used AI agent nodes with structured output parsers to enforce professional hooks and brand guidelines.

- Designed a Gmail-based approval system with one-click publish triggers.
- Automated performance tracking by logging metadata into Google Sheets.

Autonomous YouTube Automation Engine (Reddit-to-Video)

- Engineered an n8n system that scrapes trending stories from Reddit, fictionalizes them using LLMs, and generates video content.
- Implemented LangChain text classifiers and information extractors for story filtering and character consistency.
- Orchestrated an API-driven video generation pipeline with automated TTS and background syncing.
- Managed processing states using Supabase for reliable rendering workflows.

WORK EXPERIENCE

Assistant System Engineer – Tata Consultancy Services (TCS) | Aug 2024 – Present

- Designed and maintained reliable backend workflows supporting enterprise financial systems.
- Built and integrated REST APIs enabling secure data exchange between services.
- Implemented validation, error handling, and logging to improve system reliability.
- Optimized PL/SQL queries and triggers, improving performance by approximately 30%.
- Collaborated with cross-functional teams to deliver production-ready solutions.

Software Engineering Fellow – Headstarter AI | Jun 2024 – Jul 2024

- Built automation-friendly backend systems with clear data contracts.
- Worked on AI-assisted workflows emphasizing deterministic logic and reliability.
- Translated product requirements into scalable technical implementations.

Software Developer Intern – OpenBootcamp | Nov 2023 – Dec 2023

- Developed JavaScript-based applications and backend logic.
- Practiced structured development workflows using Git and collaborative tools.

EDUCATION

Bachelors in Tech – Computer Science and Engineering

SASTRA Deemed University (2020-2024)

Relevant Coursework: Distributed Systems, Database Systems, Software Engineering, Cybersecurity
